**To Whom it May Concern**

Cancer Treatment for Mrs. Loredana Gabriela Nita

Mrs. **Loredana Gabriela Nita**, (born 07-06-1976), sent us her medical records indicating that she suffers from breast cancer.

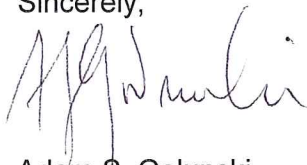

After reviewing Mrs. Nita's medical records we offered her a treatment at our Clinic within the personalized individual targeted therapy plan. As a first step the patient was asked to send her tumor tissue sample to the OncoDNA lab in Belgium for genomic test, which will be our guidance for preparing best possible treatment plan ([www.oncodna.com](http://www.oncodna.com)). The cost of this test (OncoDEEP Clinical Plus) is 2990 euro + VAT.

Estimated clinic cost for the initiation of therapy in Houston (2-3 weeks) rounds to about 38 thousand US dollars (depending on a combination of gene targeting drugs applied) with laboratory tests cost included. In a case when PET/CT scan will be necessary, it can be done here in Houston at a cost of 1400 US dollars.

Treatment, which usually lasts 8 - 12 months, will be continued back home under local Romanian oncologist's care. Estimated cost of medication might be in the area of 18-25 thousand US dollars per month.

Please do not hesitate to contact me if you have any further questions concerning this matter. My direct phone/e-fax number is 713 335-5601, e-mail: [inter.adam@burzynskiclinic.com](mailto:inter.adam@burzynskiclinic.com)

Sincerely,

Adam S. Golunski
